Natural Resource Stewardship and Science
Fort Collins, Colorado

The National Park Service, Natural Resource Stewardship and Science office in Fort Collins, Colorado publishes a range of reports that address natural resource topics of interest and applicability to a broad audience in the National Park Service and others in natural resource management, including scientists, conservation and environmental constituencies, and the public.

The Natural Resource Data Series is intended for the timely release of basic data sets and data summaries. Care has been taken to assure accuracy of raw data values, but a thorough analysis and interpretation of the data has not been completed. Consequently, the initial analyses of data in this report are provisional and subject to change.

All manuscripts in the series receive the appropriate level of peer review to ensure that the information is scientifically credible, technically accurate, appropriately written for the intended audience, and designed and published in a professional manner.

This report received informal peer review by subject-matter experts who were not directly involved in the collection, analysis, or reporting of the data.

Data in this report were collected and analyzed using methods based on established, peer-reviewed protocols and were analyzed and interpreted within the guidelines of the protocols.

Views, statements, findings, conclusions, recommendations, and data in this report do not necessarily reflect views and policies of the National Park Service, U.S. Department of the Interior. Mention of trade names or commercial products does not constitute endorsement or recommendation for use by the U.S. Government.

This report is available from (<http://science.nature.nps.gov/im/units/secn>) and the Natural Resource Publications Management website (<http://www.nature.nps.gov/publications/nrpm/>).

List of Terms

Absolute cover: The total amount of ground surface that is covered by each species or group. Describes the amount of cover that each species or group represents in a stratum. Expressed as a percentage. Can exceed 100% due to overlap. The total cover of each species or group divided by the total possible cover for a plot.

Canopy species: Woody species known to occur in the midstory or overstory of the canopy, or shrub species that grow greater than or equal to 4 cm DBH and measureable at breast height (1.4 m).

Canopy stratum: The structural zone above 1.1 m (i.e., elbow height of a typical observer as per densiometer instructions) and consists of all live and dead plant material that affects the amount of light penetrating to the ground. This includes individual elements whose cover is also potentially measured and accounted for in the shrub- or groundcover-stratum measurements, but exceeds 1.1 m in height, is detected by the densiometer, and contributes to canopy cover. Also referred to as the midstory, overstory, or sub-canopy.

Cover: The vertical projection of the outermost extent of a species, or the extent of the shadow cast by the species if the sun were directly overhead. Foliar cover.

DBH: Diameter at breast height, or 1.4 m above the ground's surface.

Frequency: The number of times a species or group is detected in a plot, expressed as a percentage. Provides information on regularity at which a species or group is encountered.

Groundcover stratum: The structural zone that consists of all non-woody species (i.e., forbs and graminoids), and all woody species (i.e., shrubs and trees) with a DBH of less than 1 cm and seedlings 30 cm or less in height.

Relative cover: The cover of each species or group as a function of all other plant species that occurred in a plot. Describes the percentage of cover that each species represents out of the total vegetative cover in a stratum. Expressed as a percentage. Always sums to 100%. The total cover of each species or group divided by the sum of the cover of all other species that occur in a plot.

Seedlings: Woody dicotyledonous plants less than 30 cm in height.

Shrub stratum: All woody species greater than 30 cm in height with a DBH of 1–4 cm.

Stratum: A structural size category of vegetation at a site. These are the canopy, shrub, and groundcover layers.

Executive Summary

In 2009, the National Park Service (NPS) Southeast Coast Network (SECN) Inventory and Monitoring Network began collecting vegetation community data as part the NPS Vital Signs monitoring program. Information collected under this Vital Sign will be used to help managers make better informed decisions by understanding trends and variability related to plant species, frequency of occurrence, percent cover, diversity, and distribution in the groundcover, shrub, and canopy strata.

Within each stratum, vegetation communities were sampled using a hybrid of methods used by the North Carolina Vegetation Survey nested-subplot design (Peet et al. 1998) within a circular plot similar to the Forest Inventory and Analysis protocol (Bechtold and Patterson 2005). This report summarizes vegetation community data collected at Congaree National Park in 2010.

1. Data were collected at 30 spatially-balanced random locations at the Park. . The findings below apply only to portions of the park that meet the following site selection criteria:
 - a) Sites are located within park boundaries and ownership.
 - b) Sites must be sampleable within safety guidelines.
 - c) Sites cannot be located in wholly non-natural areas, open water, or areas where application of the methods is inappropriate (such as marshes).
2. Sampling activities occurred at the Park from 6/12 to 7/3/2010.
3. Monitoring efforts resulted in the addition of six species, subspecies, or varieties to the park's species list.
4. Absolute canopy cover across the park was approximately 83%.
5. Water tupelo (*Nyssa aquatica*) had the largest average diameter at breast height of any canopy species at the park.
6. Boxelder (*Acer negundo*) was the most frequently detected seedling species.
7. Paw-paw (*Asimina triloba*) was the most frequently occurring species in the shrub stratum.
8. Paw-paw had the highest absolute and relative cover in the shrub stratum.
9. *Smilax* spp. and poison ivy (*Toxicodendron radicans* ssp. *radicans*) were the most frequently occurring species in the groundcover stratum.
10. Giant cane (*Arundinaria gigantea* ssp. *gigantea*) had the highest absolute and relative cover in the groundcover stratum.
11. The full dataset, and associated metadata, can be acquired from the data store at
<http://science.nature.nps.gov/nrdata/>

Introduction

Overview

Vegetation communities provide many ecosystem services. Among their many functions, they are an important component of food webs and wildlife habitat for many species, and serve as a carbon sink, produce oxygen, cycle nutrients and energy through an ecosystem, influence the local climate, improve water quality, and moderate flooding and erosion. Plant communities also respond to multiple stressors such as changes in air quality, hydrology, disturbance regimes, and climate. Determining trends in vegetation communities is vital to understanding the ecological processes occurring at a site, and identifying stressors and their impacts.

Vegetation communities are dynamic entities with constant changes in composition, cover, distribution, and structure that reflect stressor response, natural or anthropogenic in origin. Disturbance is the primary stressor and regulating mechanism of SECN vegetation communities. The timing, type, and extent of the disturbance generally evoke a distinguishable response in the species composition, diversity, and structure of the landscape (Foster et al. 1998, Turner et al. 1990). The primary natural-disturbance processes in SECN parks are fire and weather (e.g., hurricanes, drought). Anthropogenic influences include fire suppression, landscape fragmentation, altered hydrology, and non-native species introduction.

The SECN is composed of a diverse assemblage of vegetation communities. Approximately 180 vegetation associations (i.e., fine-resolution floristic description), as defined by the National Vegetation and Classification System (FGDC 2008), occur in the SECN. These communities vary widely in distribution, species composition, and structure, and include sparsely vegetated primary dune communities, late successional old-growth bottomland hardwood forest communities, and highly diverse herbaceous-dominated mesic pine savannah communities.

Given the widespread anthropogenic influences in SECN parks and the importance of vegetation communities, quantifying trends in plant cover, frequency, diversity, and distribution is a high priority (DeVivo et al. 2008). Evaluating trends in these metrics provides measures for assessing the ecological integrity and sustainability of southeastern ecosystems, and identifying the need for specific management activities on our park lands. The National Park Service Omnibus Management Act of 1998, and other reinforcing policies and regulations, require park managers “to establish baseline information and to provide information on the long-term trends in the condition of National Park System resources” (Title II, Sec. 204). The vegetation-community monitoring data summarized herein is a tool to assist park managers in fulfilling this mandate.

This report summarizes data collected as a part of the SECN’s Vegetation Community Vital Signs monitoring efforts.

Monitoring Objective

- Determine trends in plant species frequency, percent cover, diversity, and distribution in the groundcover, shrub, and canopy strata.

Methods

Study Area

Congaree National Park (CONG) is located in central South Carolina approximately 30 km (18.6 mi) southeast of the capital city of Columbia (Figure 1). The 10,845-ha (26,800 ac) park is bordered to the south by the Congaree River and the Wateree River to the east. The Park is the largest contiguous bottomland-hardwood forest remaining in the United States. As such, it consists of a variety of aquatic and terrestrial community types, and, correspondingly, hosts an exceptional diversity of flora and fauna. Because the Park is predominantly a floodplain, the vegetation communities are primarily driven by hydrologic process (i.e., hydroperiod) and soil type, and range from bald cypress (*Taxodium distichum*)- and water/swamp tupelo (*Nyssa aquatica/biflora*)-dominated communities to loblolly pine and longleaf pine (*Pinus taeda* and *P. palustris*) communities, and old pine plantations, that occur along the northern edge of the Park. The majority of the Park's vegetation communities, however, have a strong component of sugarberry (*Celtis laevigata*), sweetgum (*Liquidambar styraciflua*), and laurel oak (*Quercus laurifolia*) (American Geographic Data, Inc. 2001).

Due to the unique properties of the Park, it has been designated an International Biosphere Reserve, National Natural Landmark, Globally Important Bird Area, and also includes a 6,075-ha (15,010 ac) of congressionally-designated Wilderness Area. Further, the Park is renowned for its numerous national- and state-champion trees.

Given the location of CONG within the watershed, the Park is subject to a variety of aquatic-based stressors (i.e., pollutants) from upstream sources. Further, an unmanaged feral hog population (*Sus scrofa*) occurs at the Park and causes widespread rooting and herbivory damage. The Park has an active fire-management program to reintroduce this critical ecological process and restore and maintain the upland communities (i.e., those dominated by *Pinus* spp.).

CONG has 865 known vascular-plant species, subspecies, and varieties (NPSpecies 2011), including six species, subspecies, and varieties added to the species based on these monitoring efforts (Appendix A, Table 2).

Sampling Design

To allow for park-wide inference, the park's administrative boundary was used as the sampling frame, which was divided into a systematic 0.5-ha grid; the center point of each grid cell served

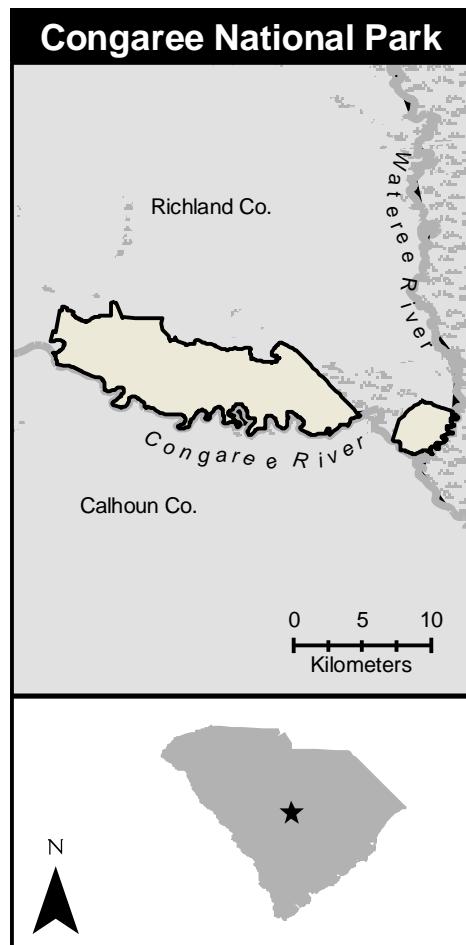

Figure 1. Location of Congaree National Park.

as the potential sampling site and the grid cell served as the macroplot. A spatially-balanced sample was drawn from this grid using the Reversed Randomized Quadrant-Recursive Raster (RRQRR) algorithm (Theobald et al. 2007). Alternate points were used when selection criteria (i.e., including safety and access issues) were not met. A sample size of 30 was chosen after consideration of park size, hypothesized variability, and logistical issues regarding travel time and conducting monitoring activities in five to six park units per year. The Park was sampled from 6/12/2010 to 7/3/2010.

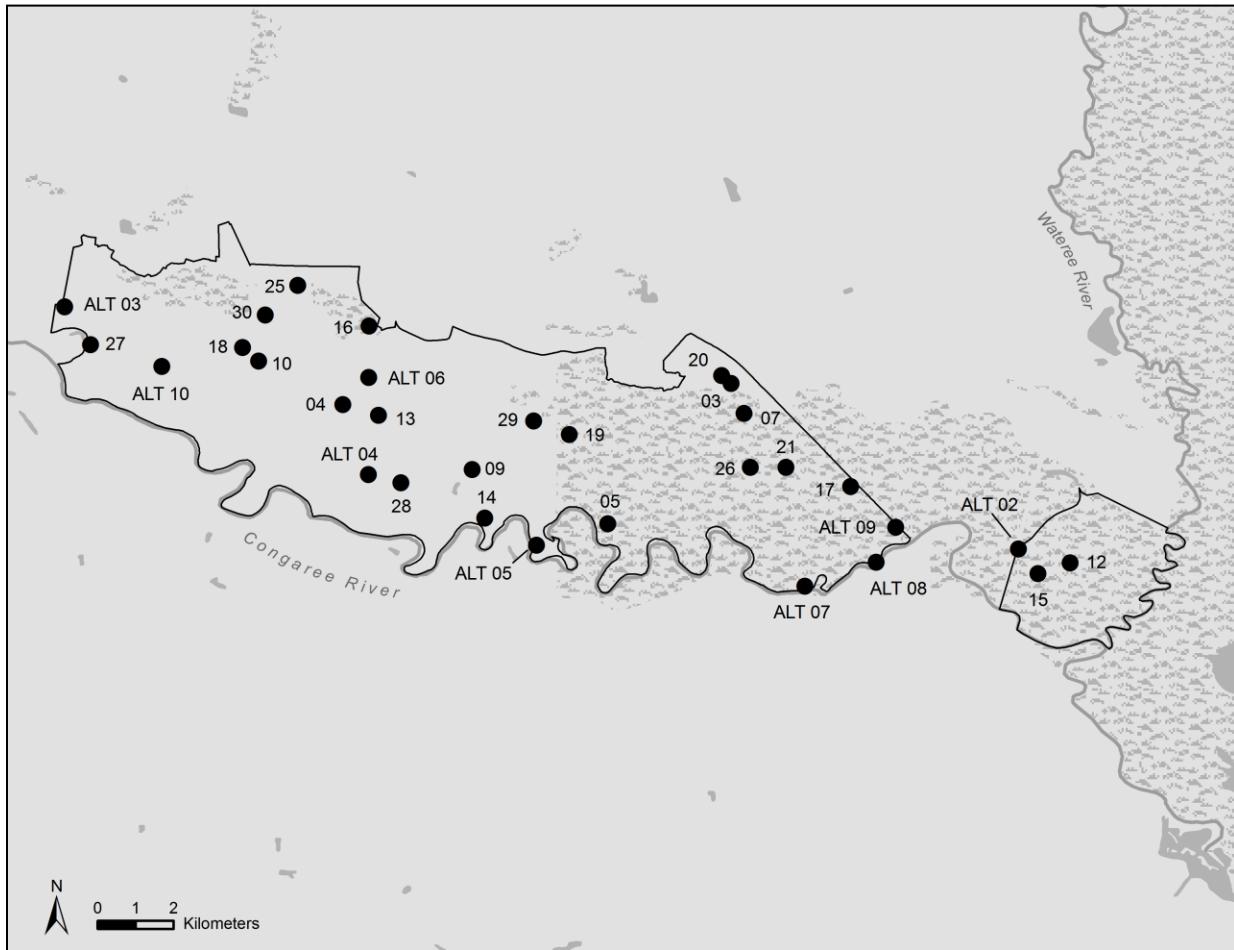

Figure 2. Spatially-balanced random sampling locations at Congaree National Park, 2010.

Taxonomic Standards

Species nomenclature for this report follow the current NPSpecies database accessible through the Integration of Resource Management Applications (IRMA) portal

(<https://irma.nps.gov/App/Portal/Home>), which represents the most recent updates from the Integrated Taxonomic Information System (ITIS; <http://www.itis.gov>). Standards used for the botanical taxonomy in this report and for all work conducted by the Southeast Coast Network are in accordance with those set forth in by ITIS

(<http://irma.nps.gov/content/help/taxonomy/FAQ.aspx>).

Occasionally, if the available characteristics of a plant did not facilitate identification to genus, species, variety, or subspecies, the lowest level of taxonomy identifiable (i.e., the most refined) was used. For example, species of *Dicanthelium* are extremely difficult to identify to species when they lack floral or fruiting structures. In this case, the specimen may only be identified to genus as *Dicanthelium* sp. In the event that a species has more than one variety or subspecies that occurs for a park and the specific variety or subspecies cannot be identified in the field, only the genus and species name were used. For example, several varieties of *Pteridium aquilinum* are known. If for some reason the observer was only able to identify the plant as *Pteridium aquilinum* and not further to variety, only *Pteridium aquilinum* was reported. In these cases, the identified and reported name may not be included in the existing park species list from NPSpecies, only the sub-species or varieties are included in the park species list. Because the genus or species is already known to occur in the park, the general taxonomy will not appear in the “new vascular plant species” (Table 2). In the event a family name, generic name, or genera and species name only (no variety, subspecies, etc.) is used, the most recent taxonomy represented in ITIS is used for these general terms.

Sampling Methodology

Vegetation community measures were divided into three strata based upon diameter at breast height (DBH) of woody species: canopy, shrub, and groundcover. Any non-woody (i.e., herbaceous) species was considered part of the groundcover stratum. Within each stratum, vegetation communities were sampled using a hybrid of methods used by the North Carolina Vegetation Survey nested-subplot design (Peet et al. 1998) within a circular plot similar to the Forest Inventory and Analysis protocol (Bechtold and Patterson 2005).

Plot Layout

The layout consisted of a circular plot with a radius of 15 m within the 0.5-ha macroplot. Subplots were systematically placed along six transects that radiated out from the center point at azimuths of 0°/360°, 60°, 120°, 180°, 240°, and 300° (Figure 3). To avoid overlap, subplots originated four meters from the macroplot (i.e., 0.5-ha grid) center point and extended away from the center point. Five measures were collected in the nested subplots within each plot: canopy cover, shrub cover, DBH, canopy-species seedling frequency, and herbaceous cover. Canopy cover was measured from the center point of the 0.5-ha macroplot. Shrub coverage was measured in two 2 × 4 m shrub plots along each transect. The shrub plots were further subdivided into 2 × 2 m subplots to improve cover-estimation accuracy and precision because cover-estimation error increases with plot size (solid gray shading, Figure 3). Groundcover coverage, groundcover nested frequency, and seedling frequency was measured in two 1 × 1 m groundcover plots (solid black shading, Figure 3) along each transect. Canopy species DBH was measured in three sections, each representing 1/3 of the total circular plot (hashed gray shading,

Figure 3). A comprehensive species list was also compiled for all species occurring in the 0.5-ha macroplot. This macroplot list supplemented the list of species detected within the vegetation-community sampling plot (i.e., in the canopy, shrub, and groundcover plots).

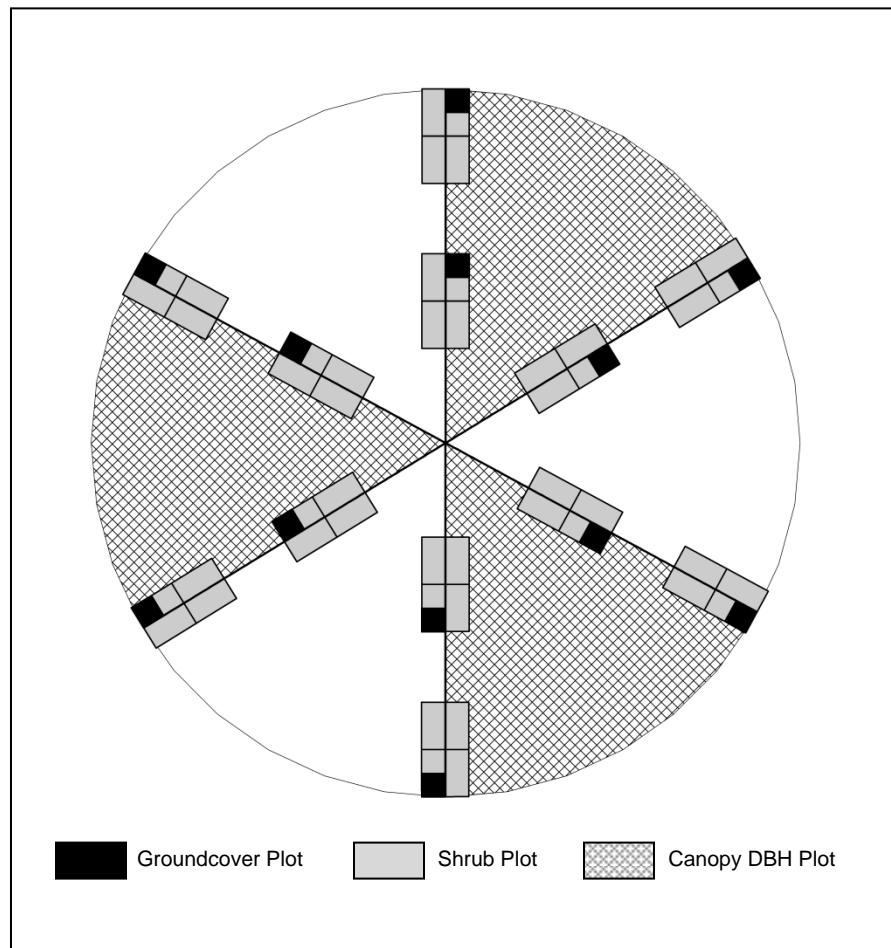

Figure 3. Southeast Coast Network vegetation-community monitoring plot layout.

Canopy Measures

Absolute canopy cover was estimated in the four cardinal directions with a concave spherical densiometer placed on a 1.1-m tall tripod at the plot center. Canopy cover reported is the mean of three observers across the four cardinal directions. The circular plot was subdivided into six sections occurring between the 0–60°, 120–180°, and 240–300° compass transects of the circular plot. Diameter at breast height (i.e., 1.37 m above the ground) was measured to the nearest millimeter for all trees (identified by species) with a diameter greater than or equal to 4 cm that occur within the 0–60°, 120–180°, and 240–300° section.

Shrub Measures

Shrub cover of all shrub species was visually estimated for each of the twelve 2 × 4 m plots. A common source of error in visual estimation of vegetation cover is that as plot size increases, cover-estimation error increases. Each shrub plot was therefore sub-divided into two 2 × 2 m subplots. The plots are situated at 15 m and 8 m (extending toward the plot center) along each of the transect lines of the circular plot. Shrub cover was categorized into one of seven coverage

classes (Table 1) for each subplot. A coverage class of zero (Table 1) is assumed for any shrub species not detected and not recorded on the datasheet. The measurements of subplots were combined by averaging the midpoint for the coverage class in the two shrub subplots resulting in a total shrub cover estimate for the 2×4 m plot. The authors have established consistent performance in the accuracy and precision of visual-cover estimates within and across observers in plots this size.

Groundcover Measures

Groundcover was visually estimated in each of the twelve 1×1 m plots situated on the clockwise side at 15 m and 8 m (extending toward the plot center) along each of the transect lines of the circular plot. Groundcover was categorized into one of seven coverage classes (Table 1) for each plot. A coverage class of zero (Table 1) is assumed for any groundcover species not detected and not recorded on the datasheet. The authors have established through trials that these coverage classes are discriminatory and repeatable across observers. Canopy-species seedling counts were estimated by counting the number of seedlings that occur in each of the 1×1 m plots.

Table 1. Cover estimation coverage class, percent cover range, and value used for analyses for SECN vegetation-community monitoring protocol.

Coverage Class	Percent Cover Range	Value Used for Analyses
0	0%	0.0
1	Trace (<1%)	0.5
2	1-5%	2.5
3	5-25%	15.0
4	25-50%	37.5
5	50-75%	62.5
6	75-95%	85.0
7	95-100%	97.5

Data Analysis

Because this is the first year of this protocol's implementation at the Park, only the status of the elements presented in the aforementioned monitoring objective are determined; except diversity and distribution. The data in this report are presented by plot and pooled across plots. Sampling locations are presented in Figure 2 and summaries by plot are presented in Tables 3–9.

Summaries include (a) new species detected (Table 2), (b) canopy cover (Table 3), (c) canopy species size (Table 4), (d) seedling frequency (Table 5), (e) shrub species relative cover and frequency (Table 6), shrub species absolute cover and frequency (Table 7), (f) groundcover relative cover and frequency (Table 8), (g) groundcover absolute cover and frequency (Table 9), (h) species detected (Appendix A), and (i) species composition within and across macroplots (Appendix B).

Findings

We detected 142 species, subspecies, and varieties during this monitoring effort (Appendix A), including six new species, subspecies, and varieties not previously known to occur at the Park (Table 2).

Table 2. New vascular plant species detected at Congaree National Park during 2010 monitoring efforts and recommended NPSpecies classifications.

Species	Abundance	Nativity	Pest	Management Priority	Exploitation Concerns
<i>Andropogon glomeratus</i>	Unknown	Native	No	No	No
<i>Conyza canadensis</i>	Unknown	Native	No	No	No
<i>Galactia elliottii</i>	Unknown	Native	No	No	No
<i>Hydrocotyle umbellata</i>	Unknown	Native	No	No	No
<i>Paspalum notatum</i>	Unknown	Native	No	No	No
<i>Solanum americanum</i>	Unknown	Native	No	No	No

Measures of Community Structure

Absolute canopy cover was variable across the all sampling locations at the park ($\bar{x} = 83.49\%$, $SD = 21.83$; Table 3). Water tupelo (*Nyssa aquatica*) had the largest average DBH ($\bar{x} = 50.38$ cm, $SD = 27.18$) of any species where more than ten individuals were sampled (Table 4). The most frequently detected seedlings were boxelder (*Acer negundo*) (estimated at $1.49/m^2$ (Table 5). Paw-paw (*Asimina triloba*) was the most frequently occurring shrub species at the park ($f = 60$) and had the highest relative cover of all other shrub species ($\bar{x} = 28.3\%$, $SD = 33.23$; Table 6). Paw-paw also had the highest absolute cover in the shrub stratum at the park ($\bar{x} = 6.59\%$, $SD = 10.5$, Table 7). *Smilax* spp. and poison ivy (*Toxicodendron radicans*) were the most frequently occurring elements (87.1%, respectively) in the groundcover stratum (Table 8). *Carex* spp. was the second most frequent element in the groundcover stratum (80.65%). Giant cane (*Arundinaria gigantea* ssp. *gigantea*) had the highest absolute cover in the groundcover stratum ($\bar{x} = 2.85\%$, $SD = 4.67$; Table 8). Muscadine grape (*Vitis rotundifolia*) had the second highest absolute cover in the groundcover stratum ($\bar{x} = 2.2\%$, $SD = 3.81$), followed by crossvine (*Bignonia capreolata*) ($\bar{x} = 2.02\%$, $SD = 2.99$). Giant cane also had the highest relative cover in the groundcover stratum ($\bar{x} = 4.62\%$, $SD = 7.62$; Table 8). Muscadine grape (*Vitis rotundifolia*) had the second highest relative cover in the groundcover stratum ($\bar{x} = 4.12\%$, $SD = 7.6$), followed by crossvine (*Bignonia capreolata*) ($\bar{x} = 3.59\%$, $SD = 5.23$; Table 9).

Table 3. Average canopy cover in vegetation monitoring sampling locations at Congaree National Park, 2010.

Appendix B. Plant species detected in macroplots.

Table B-1. Vascular plant species detected in all macroplot inventories (i.e., across macroplot species composition) at Congaree National Park, 2010.

Family	Species	Common Name
Aceraceae	<i>Acer negundo</i>	box elder
Aceraceae	<i>Acer rubrum</i>	red maple
Aceraceae	<i>Acer saccharinum</i>	silver maple
Amaranthaceae	<i>Alternanthera philoxeroides</i>	alligator weed, alligatorweed, pig weed
Anacardiaceae	<i>Rhus copallina</i>	winged sumac
Anacardiaceae	<i>Toxicodendron radicans</i>	poison ivy
Annonaceae	<i>Asimina triloba</i>	paw-paw
Apiaceae	<i>Hydrocotyle umbellata</i>	dollarweed
Apiaceae	<i>Sanicula canadensis</i>	short-styled sanicle
Aquifoliaceae	<i>Ilex decidua</i>	deciduous holly
Aquifoliaceae	<i>Ilex glabra</i>	gallberry/inberry/inkberry
Aquifoliaceae	<i>Ilex opaca</i>	American holly
Aquifoliaceae	<i>Ilex vomitoria</i>	yaupon
Araceae	<i>Arisaema dracontium</i>	green dragon
Araceae	<i>Arisaema triphyllum</i>	swamp Jack-in-the-pulpit
Arecaceae	<i>Sabal minor</i>	dwarf palmetto
Asclepiadaceae	<i>Matelea gonocarpos</i>	angularfruit milkvine
Aspleniaceae	<i>Asplenium platyneuron</i>	ebony spleenwort
Asteraceae	<i>Ambrosia artemisiifolia</i>	annual ragweed
Asteraceae	<i>Conoclinium coelestinum</i>	blue mistflower
Asteraceae	<i>Conyzza canadensis</i>	sneezeweed
Asteraceae	<i>Erechtites hieraciifolia</i>	fireweed
Asteraceae	<i>Mikania scandens</i>	climbing hempvine, climbing hempweed
Asteraceae	<i>Packera glabella</i>	butterweed
Balsaminaceae	<i>Impatiens capensis</i>	spotted jewelweed
Betulaceae	<i>Carpinus caroliniana</i>	American hornbeam
Betulaceae	<i>Ostrya virginiana</i>	eastern hop hornbeam, hop hornbeam
Bignoniaceae	<i>Bignonia capreolata</i>	crossvine
Bignoniaceae	<i>Campsis radicans</i>	trumpet creeper
Blechnaceae	<i>Woodwardia areolata</i>	chainfern, netted chainfern
Brassicaceae	<i>Lepidium virginicum</i>	poor-man's pepper-grass
Calycanthaceae	<i>Calycanthus floridus</i>	sweetshrub
Caprifoliaceae	<i>Lonicera japonica</i>	Chinese honeysuckle, Japanese honeysuckle
Caprifoliaceae	<i>Sambucus canadensis</i>	common elderberry
Clethraceae	<i>Clethra alnifolia</i>	coast pepper-bush
Clusiaceae	<i>Hypericum hypericoides</i>	St. Andrews cross, St. Andrew's cross
Clusiaceae	<i>Triadenum walteri</i>	greater marsh St. Johnswort
Commelinaceae	<i>Commelina virginica</i>	virginia day-flower
Cucurbitaceae	<i>Melothria pendula</i>	drooping melon nettle, Guadeloupe cucumber
Cyperaceae	<i>Carex glaucescens</i>	clustered sedge, southern waxy sedge
Cyperaceae	<i>Carex lupulina</i>	hop sedge
Cyperaceae	<i>Scleria triglomerata</i>	whip nutrush
Dryopteridaceae	<i>Athyrium filix-femina</i>	common ladyfern, lady fern, ladyfern
Dryopteridaceae	<i>Onoclea sensibilis</i>	sensitive fern
Dryopteridaceae	<i>Polystichum acrostichoides</i>	Christmas fern
Ebenaceae	<i>Diospyros virginiana</i>	persimmon
Ericaceae	<i>Vaccinium corymbosum</i>	highbush blueberry

Table B-1. Continued.

Family	Species	Common Name
Euphorbiaceae	<i>Acalypha gracilens</i>	slender copperleaf, slender threeseed mercury
Fabaceae	<i>Chamaecrista nictitans</i>	partridge pea, partridge-pea
Fabaceae	<i>Galactia elliottii</i>	Elliott's milkpea
Fagaceae	<i>Fagus grandifolia</i>	American beech
Fagaceae	<i>Quercus alba</i>	white oak
Fagaceae	<i>Quercus laurifolia</i>	laurel-leaf oak
Fagaceae	<i>Quercus lyrata</i>	overcup oak
Fagaceae	<i>Quercus michauxii</i>	swamp chestnut oak
Fagaceae	<i>Quercus nigra</i>	water oak
Fagaceae	<i>Quercus phellos</i>	willow oak
Fagaceae	<i>Quercus shumardii</i>	shumard oak, Shumard's oak
Grossulariaceae	<i>Itea virginica</i>	Virginia willow/sweespire
Haloragaceae	<i>Proserpinaca palustris</i>	marsh mermaid-weed
Hamamelidaceae	<i>Liquidambar styraciflua</i>	sweetgum
Hydrangeaceae	<i>Decumaria barbara</i>	climbing hydrangea
Iridaceae	<i>Hypoxis hirsuta</i> var. <i>leptocarpa</i>	yellow stargrass
Juglandaceae	<i>Carya aquatica</i>	water hickory
Juglandaceae	<i>Carya ovata</i>	shag-bark hickory
Juncaceae	<i>Juncus effusus</i>	soft rush
Lauraceae	<i>Lindera benzoin</i>	northern spicebush, spicebush
Lauraceae	<i>Sassafras albidum</i>	sassafras
Liliaceae	<i>Liriope muscari</i>	big blue lilyturf
Loganiaceae	<i>Gelsemium sempervirens</i>	yellow jessamine
Lygodiaceae	<i>Lygodium japonicum</i>	Japanese climbing fern
Magnoliaceae	<i>Magnolia virginiana</i>	sweetbay magnolia
Moraceae	<i>Morus rubra</i>	red mulberry
Myricaceae	<i>Morella cerifera</i>	wax myrtle
Nyssaceae	<i>Nyssa aquatica</i>	water tupelo
Nyssaceae	<i>Nyssa biflora</i>	swamp tupelo
Nyssaceae	<i>Nyssa sylvatica</i>	black gum, black tupelo, blackgum
Oleaceae	<i>Fraxinus americana</i>	white ash
Oleaceae	<i>Fraxinus caroliniana</i>	Carolina ash
Oleaceae	<i>Fraxinus pennsylvanica</i>	green ash
Oleaceae	<i>Fraxinus sp.</i>	ash
Oleaceae	<i>Ligustrum sinense</i>	Chinese privet, common chinese privet common evening primrose, common eveningprimrose,
Onagraceae	<i>Oenothera biennis</i>	common evening-primrose
Osmundaceae	<i>Osmunda cinnamomea</i>	cinnamon fern
Osmundaceae	<i>Osmunda regalis</i>	royal fern
Oxalidaceae	<i>Oxalis stricta</i>	sorrel
Passifloraceae	<i>Passiflora incarnata</i>	purple passionflower
Passifloraceae	<i>Passiflora lutea</i>	passionflower, yellow passionflower
Phytolaccaceae	<i>Phytolacca americana</i>	American pokeweed, common pokeweed, inkberry
Pinaceae	<i>Pinus taeda</i>	loblolly pine
Platanaceae	<i>Platanus occidentalis</i>	American sycamore, sycamore
Poaceae	<i>Andropogon glomeratus</i>	bushy bluestem
Poaceae	<i>Andropogon virginicus</i>	broom-sedge
Poaceae	<i>Arundinaria gigantea</i>	giant-cane
Poaceae	<i>Chasmanthium latifolium</i>	indian sea-oats
Poaceae	<i>Chasmanthium sessiliflorum</i>	longleaf spikegrass, longleaf woodoats
Poaceae	<i>Elymus virginicus</i>	Virginia wild rye, Virginia wildrye

Table B-1. Continued.

Family	Species	Common Name
Poaceae	<i>Microstegium vimineum</i>	eulalia
Poaceae	<i>Oplismenus hirtellus</i>	bristle basketgrass
Poaceae	<i>Paspalum notatum</i>	bahiagrass
Poaceae	<i>Saccharum giganteum</i>	sugarcane plumegrass
Poaceae	<i>Schizachyrium scoparium</i>	little bluestem
Polypodiaceae	<i>Pleopeltis polypodioides</i>	resurrection fern
Rhamnaceae	<i>Berchemia scandens</i>	supplejack/ratanvine
Rosaceae	<i>Photinia pyrifolia</i>	red chokeberry
Rosaceae	<i>Potentilla canadensis</i>	canada cinquefoil
Rosaceae	<i>Prunus serotina</i>	wild black cherry
Rosaceae	<i>Rubus argutus</i>	prickly Florida blackberry, sawtooth blackberry
Rosaceae	<i>Rubus cuneifolius</i>	sand blackberry
Rosaceae	<i>Rubus trivialis</i>	southern dewberry
Rubiaceae	<i>Cephalanthus occidentalis</i>	common buttonbush
Rubiaceae	<i>Diodia virginiana</i>	larger button-weed
Rubiaceae	<i>Galium aparine</i>	bedstraw, catchweed bedstraw, cleavers
Rubiaceae	<i>Mitchella repens</i>	partridgeberry
Salicaceae	<i>Populus deltoides</i>	common cottonwood, cottonwood, eastern cottonwood
Salicaceae	<i>Populus heterophylla</i>	swamp cottonwood
Saururaceae	<i>Saururus cernuus</i>	lizards tail, lizard's tail
Smilacaceae	<i>Smilax bona-nox</i>	saw greenbrier
Smilacaceae	<i>Smilax laurifolia</i>	laurel-leaf greenbrier
Solanaceae	<i>Solanum americanum</i>	American nightshade
Taxodiaceae	<i>Taxodium ascendens</i>	pond cypress, pondcypress
Ulmaceae	<i>Celtis laevigata</i>	sugarberry
Ulmaceae	<i>Ulmus alata</i>	winged elm
Ulmaceae	<i>Ulmus americana</i>	American elm
Urticaceae	<i>Boehmeria cylindrica</i>	false nettle
Verbenaceae	<i>Callicarpa americana</i>	American beautyberry
Verbenaceae	<i>Verbena brasiliensis</i>	Brazilian vervain
Vitaceae	<i>Ampelopsis arborea</i>	sweet pepper-vine
Vitaceae	<i>Parthenocissus quinquefolia</i>	virginia creeper
Vitaceae	<i>Vitis aestivalis</i>	summer grape
Vitaceae	<i>Vitis rotundifolia</i>	muscadine, muscadine grape

Table B-2. Vascular plant species detected in each macropot inventory (i.e., within macropot species composition) at Congaree National Park, 2010.

Sampling Location	Species
3	<i>Acer rubrum</i>
3	<i>Callicarpa americana</i>
3	<i>Calycanthus floridus</i>
3	<i>Carex lupulina</i>
3	<i>Carex sp.</i>
3	<i>Carpinus caroliniana</i>
3	<i>Clethra alnifolia</i>
3	<i>Dioscorea sp.</i>
3	<i>Elephantopus sp.</i>

29	Unknown Dicot Forb

Table B-2. Continued.

Sampling Location	Species
29	<i>Unknown Poaceae</i>
29	<i>Viola sp.</i>
30	<i>Acer rubrum</i>
30	<i>Arundinaria gigantea</i>
30	<i>Asimina triloba</i>
30	<i>Asplenium platyneuron</i>
30	<i>Berchemia scandens</i>
30	<i>Bignonia capreolata</i>
30	<i>Boehmeria cylindrica</i>
30	<i>Carex lupulina</i>
30	<i>Carex sp.</i>
30	<i>Carpinus caroliniana</i>
30	<i>Celtis laevigata</i>
30	<i>Fraxinus pennsylvanica</i>
30	<i>Fraxinus sp.</i>
30	<i>Ilex decidua</i>
30	<i>Ilex opaca</i>
30	<i>Ilex vomitoria</i>
30	<i>Ligustrum sinense</i>
30	<i>Liquidambar styraciflua</i>
30	<i>Microstegium vimineum</i>
30	<i>Mikania scandens</i>
30	<i>Mitchella repens</i>
30	<i>Nyssa aquatica</i>
30	<i>Nyssa biflora</i>
30	<i>Ostrya virginiana</i>
30	<i>Panicum sp.</i>
30	<i>Parthenocissus quinquefolia</i>
30	<i>Pinus taeda</i>
30	<i>Polygonum sp.</i>
30	<i>Quercus laurifolia</i>
30	<i>Quercus lyrata</i>
30	<i>Rubus argutus</i>
30	<i>Smilax sp.</i>
30	<i>Taxodium ascendens</i>
30	<i>Thelypteris sp.</i>
30	<i>Toxicodendron radicans</i>
30	<i>Commelina virginica</i>
30	<i>Unknown Cyperaceae</i>
30	<i>Unknown Poaceae</i>
30	<i>Vitis rotundifolia</i>
A4	<i>Acer negundo</i>
A4	<i>Arundinaria gigantea</i>
A4	<i>Asimina triloba</i>
A4	<i>Bignonia capreolata</i>
A4	<i>Boehmeria cylindrica</i>
A4	<i>Campsis radicans</i>
A4	<i>Carex lupulina</i>
A4	<i>Carex sp.</i>
A4	<i>Carpinus caroliniana</i>
A4	<i>Celtis laevigata</i>
A4	<i>Fraxinus americana</i>
A4	<i>Ilex decidua</i>
A4	<i>Liquidambar styraciflua</i>
A4	<i>Nyssa aquatica</i>

Table B-2. Continued.

Sampling Location	Species
A4	<i>Oplismenus hirtellus</i>
A4	<i>Osmunda cinnamomea</i>
A4	<i>Panicum sp.</i>
A4	<i>Parthenocissus quinquefolia</i>
A4	<i>Quercus laurifolia</i>
A4	<i>Rhynchospora sp.</i>
A4	<i>Senecio sp.</i>
A4	<i>Smilax sp.</i>
A4	<i>Taxodium ascendens</i>
A4	<i>Toxicodendron radicans</i>
A4	<i>Ulmus americana</i>
A4	<i>Unknown Dicot Forb</i>
A4	<i>Viola sp.</i>
A2	<i>Acalypha gracilens</i>
A2	<i>Acer negundo</i>
A2	<i>Acer rubrum</i>
A2	<i>Acer saccharinum</i>
A2	<i>Alternanthera philoxeroides</i>
A2	<i>Ambrosia artemisiifolia</i>
A2	<i>Ampelopsis arborea</i>
A2	<i>Andropogon glomeratus</i>
A2	<i>Arisaema dracontium</i>
A2	<i>Arundinaria gigantea</i>
A2	<i>Aster sp.</i>
A2	<i>Boehmeria cylindrica</i>
A2	<i>Campsis radicans</i>
A2	<i>Carex sp.</i>
A2	<i>Carpinus caroliniana</i>
A2	<i>Celtis laevigata</i>
A2	<i>Celtis laevigata</i>
A2	<i>Cephalanthus occidentalis</i>
A2	<i>Chamaecrista nictitans</i>
A2	<i>Chamaesyce sp.</i>
A2	<i>Conyza canadensis</i>
A2	<i>Cuphea sp.</i>
A2	<i>Cuscuta sp.</i>
A2	<i>Cyperus sp.</i>
A2	<i>Dichanthelium sp.</i>
A2	<i>Dichanthelium sp.</i>
A2	<i>Diodia virginiana</i>
A2	<i>Fraxinus pennsylvanica</i>
A2	<i>Galactia elliottii</i>
A2	<i>Galium sp.</i>
A2	<i>Hibiscus sp.</i>
A2	<i>Impatiens capensis</i>
A2	<i>Ipomoea sp.</i>
A2	<i>Juncus effusus</i>
A2	<i>Juncus sp.</i>
A2	<i>Lezpedeza sp.</i>
A2	<i>Liquidambar styraciflua</i>
A2	<i>Lonicera japonica</i>
A2	<i>Matelea gonocarpos</i>
A2	<i>Oxalis stricta</i>
A2	<i>Panicum sp.</i>
A2	<i>Parthenocissus quinquefolia</i>

Table B-2. Continued.

Sampling Location	Species
A2	<i>Passiflora incarnata</i>
A2	<i>Platanus occidentalis</i>
A2	<i>Polygonum</i> sp.
A2	<i>Populus heterophylla</i>
A2	<i>Prunus serotina</i>
A2	<i>Rhynchospora</i> sp.
A2	<i>Rubus argutus</i>
A2	<i>Rubus trivialis</i>
A2	<i>Sabatia</i> sp.
A2	<i>Saccharum giganteum</i>
A2	<i>Smilax</i> sp.
A2	<i>Solanum americanum</i>
A2	<i>Solidago</i> sp.
A2	<i>Trifolium</i> sp.
A2	<i>Ulmus alata</i>
A2	<i>Ulmus americana</i>
A2	<i>Unknown Poaceae</i>
A2	<i>Verbena brasiliensis</i>
A2	<i>Vitis aestivalis</i>
A2	<i>Vitis rotundifolia</i>
A3	<i>Acer rubrum</i>
A3	<i>Ampelopsis arborea</i>
A3	<i>Arundinaria gigantea</i>
A3	<i>Asclepias</i> sp.
A3	<i>Asimina triloba</i>
A3	<i>Berchemia scandens</i>
A3	<i>Boehmeria cylindrica</i>
A3	<i>Campsis radicans</i>
A3	<i>Carex lupulina</i>
A3	<i>Carex</i> sp.
A3	<i>Carya aquatica</i>
A3	<i>Celtis laevigata</i>
A3	<i>Celtis laevigata</i>
A3	<i>Cephalanthus occidentalis</i>
A3	<i>Crataegus</i> sp.
A3	<i>Fraxinus pennsylvanica</i>
A3	<i>Fraxinus</i> sp.
A3	<i>Hydrocotyle</i> sp.
A3	<i>Ilex decidua</i>
A3	<i>Liquidambar styraciflua</i>
A3	<i>Microstegium vimineum</i>
A3	<i>Nyssa biflora</i>
A3	<i>Onoclea sensibilis</i>
A3	<i>Osmunda regalis</i>
A3	<i>Panicum</i> sp.
A3	<i>Parthenocissus quinquefolia</i>
A3	<i>Polygonum</i> sp.
A3	<i>Populus heterophylla</i>
A3	<i>Quercus laurifolia</i>
A3	<i>Quercus lyrata</i>
A3	<i>Quercus phellos</i>
A3	<i>Rubus argutus</i>
A3	<i>Saururus cernuus</i>
A3	<i>Smilax</i> sp.
A3	<i>Taxodium ascendens</i>

Table B-2. Continued.

Sampling Location	Species
A3	<i>Toxicodendron radicans</i>
A3	<i>Unknown Asclepiadaceae</i>
A3	<i>Commelina virginica</i>
A3	<i>Unknown Cyperaceae</i>
A3	<i>Unknown Dicot Forb</i>
A3	<i>Unknown Poaceae</i>
A3	<i>Viola sp.</i>
A3	<i>Vitis aestivalis</i>
A3	<i>Vitis rotundifolia</i>
A5	<i>Acer negundo</i>
A5	<i>Ampelopsis arborea</i>
A5	<i>Asimina triloba</i>
A5	<i>Bignonia capreolata</i>
A5	<i>Boehmeria cylindrica</i>
A5	<i>Carex lupulina</i>
A5	<i>Carex sp.</i>
A5	<i>Celtis laevigata</i>
A5	<i>Ilex decidua</i>
A5	<i>Ligustrum sinense</i>
A5	<i>Ligustrum sinense</i>
A5	<i>Liquidambar styraciflua</i>
A5	<i>Microstegium vimineum</i>
A5	<i>Oxalis stricta</i>
A5	<i>Panicum sp.</i>
A5	<i>Parthenocissus quinquefolia</i>
A5	<i>Platanus occidentalis</i>
A5	<i>Polygonum sp.</i>
A5	<i>Quercus laurifolia</i>
A5	<i>Sanicula sp.</i>
A5	<i>Saururus cernuus</i>
A5	<i>Smilax sp.</i>
A5	<i>Solanum sp.</i>
A5	<i>Toxicodendron radicans</i>
A5	<i>Ulmus alata</i>
A5	<i>Unknown Cyperaceae</i>
A5	<i>Unknown Dicot Forb</i>
A5	<i>Viola sp.</i>
A5	<i>Vitis rotundifolia</i>
A6	<i>Acer rubrum</i>
A6	<i>Arisaema dracontium</i>
A6	<i>Arundinaria gigantea</i>
A6	<i>Asimina triloba</i>
A6	<i>Athyrium filix-femina</i>
A6	<i>Berchemia scandens</i>
A6	<i>Bignonia capreolata</i>
A6	<i>Boehmeria cylindrica</i>
A6	<i>Campsis radicans</i>
A6	<i>Carex glaucescens</i>
A6	<i>Carex sp.</i>
A6	<i>Carpinus caroliniana</i>
A6	<i>Carya sp.</i>
A6	<i>Celtis laevigata</i>
A6	<i>Crataegus sp.</i>
A6	<i>Dichanthelium sp.</i>
A6	<i>Fraxinus sp.</i>

Table B-2. Continued.

Sampling Location	Species
A6	<i>Galium</i> sp.
A6	<i>Ilex decidua</i>
A6	<i>Ilex opaca</i>
A6	<i>Liquidambar styraciflua</i>
A6	<i>Matelea</i> sp.
A6	<i>Melothria pendula</i>
A6	<i>Microstegium vimineum</i>
A6	<i>Mitchella repens</i>
A6	<i>Osmunda cinnamomea</i>
A6	<i>Ostrya virginiana</i>
A6	<i>Parthenocissus quinquefolia</i>
A6	<i>Passiflora lutea</i>
A6	<i>Polygonum</i> sp.
A6	<i>Populus heterophylla</i>
A6	<i>Quercus laurifolia</i>
A6	<i>Quercus lyrata</i>
A6	<i>Rhynchospora</i> sp.
A6	<i>Rubus argutus</i>
A6	<i>Sabal minor</i>
A6	<i>Sanicula canadensis</i>
A6	<i>Saururus cernuus</i>
A6	<i>Senecio</i> sp.
A6	<i>Smilax</i> sp.
A6	<i>Toxicodendron radicans</i>
A6	<i>Ulmus americana</i>
A6	<i>Commelina virginica</i>
A6	<i>Unknown Dicot Forb</i>
A6	<i>Unknown Poaceae</i>
A6	<i>Viola</i> sp.
A6	<i>Vitis rotundifolia</i>
A7	<i>Acer negundo</i>
A7	<i>Acer rubrum</i>
A7	<i>Acer saccharinum</i>
A7	<i>Arisaema dracontium</i>
A7	<i>Asimina triloba</i>
A7	<i>Asplenium platyneuron</i>
A7	<i>Bignonia capreolata</i>
A7	<i>Boehmeria cylindrica</i>
A7	<i>Carex lupulina</i>
A7	<i>Carex</i> sp.
A7	<i>Celtis laevigata</i>
A7	<i>Fraxinus pennsylvanica</i>
A7	<i>Ilex decidua</i>
A7	<i>Impatiens capensis</i>
A7	<i>Ligustrum sinense</i>
A7	<i>Lindera benzoin</i>
A7	<i>Liquidambar styraciflua</i>
A7	<i>Matelea gonocarpos</i>
A7	<i>Parthenocissus quinquefolia</i>
A7	<i>Platanus occidentalis</i>
A7	<i>Polygonum</i> sp.
A7	<i>Populus heterophylla</i>
A7	<i>Rhynchospora</i> sp.
A7	<i>Sanicula canadensis</i>
A7	<i>Smilax</i> sp.

Table B-2. Continued.

Sampling Location	Species
A7	<i>Toxicodendron radicans</i>
A7	<i>Unknown Apiaceae</i>
A7	<i>Unknown Cyperaceae</i>
A7	<i>Unknown Dicot Forb</i>
A7	<i>Viola sp.</i>
A7	<i>Vitis aestivalis</i>
A7	<i>Vitis rotundifolia</i>
A8	<i>Acalypha gracilens</i>
A8	<i>Acer negundo</i>
A8	<i>Acer saccharinum</i>
A8	<i>Ampelopsis arborea</i>
A8	<i>Arundinaria gigantea</i>
A8	<i>Asimina triloba</i>
A8	<i>Bignonia capreolata</i>
A8	<i>Boehmeria cylindrica</i>
A8	<i>Carex lupulina</i>
A8	<i>Carex sp.</i>
A8	<i>Carpinus caroliniana</i>
A8	<i>Carya aquatica</i>
A8	<i>Celtis laevigata</i>
A8	<i>Chasmanthium latifolium</i>
A8	<i>Commelina sp.</i>
A8	<i>Fraxinus pennsylvanica</i>
A8	<i>Ilex decidua</i>
A8	<i>Ilex opaca</i>
A8	<i>Impatiens capensis</i>
A8	<i>Ligustrum sinense</i>
A8	<i>Lindera benzoin</i>
A8	<i>Liquidambar styraciflua</i>
A8	<i>Liriope muscari</i>
A8	<i>Matelea gonocarpos</i>
A8	<i>Microstegium vimineum</i>
A8	<i>Panicum sp.</i>
A8	<i>Parthenocissus quinquefolia</i>
A8	<i>Platanus occidentalis</i>
A8	<i>Polygonum sp.</i>
A8	<i>Populus deltoides</i>
A8	<i>Rhynchospora sp.</i>
A8	<i>Rubus argutus</i>
A8	<i>Saururus cernuus</i>
A8	<i>Smilax sp.</i>
A8	<i>Toxicodendron radicans</i>
A8	<i>Ulmus alata</i>
A8	<i>Ulmus americana</i>
A8	<i>Unknown Apiaceae</i>
A8	<i>Unknown Dicot Forb</i>
A8	<i>Unknown Poaceae</i>
A8	<i>Viola sp.</i>
A8	<i>Vitis rotundifolia</i>
A9	<i>Acer rubrum</i>
A9	<i>Boehmeria cylindrica</i>
A9	<i>Erechtites hieraciifolia</i>
A9	<i>Fraxinus sp.</i>
A9	<i>Itea virginica</i>
A9	<i>Ludwigia sp.</i>

Table B-2. Continued.

Sampling Location	Species
A9	<i>Lycopus</i> sp.
A9	<i>Nyssa aquatica</i>
A9	<i>Quercus lyrata</i>
A9	<i>Saururus cernuus</i>
A9	<i>Taxodium ascendens</i>
A9	<i>Toxicodendron radicans</i>
A9	<i>Triadenum walteri</i>
A9	<i>Ulmus americana</i>
A10	<i>Acer negundo</i>
A10	<i>Acer rubrum</i>
A10	<i>Arundinaria gigantea</i>
A10	<i>Asimina triloba</i>
A10	<i>Bignonia capreolata</i>
A10	<i>Boehmeria cylindrica</i>
A10	<i>Carex lupulina</i>
A10	<i>Carpinus caroliniana</i>
A10	<i>Carya ovata</i>
A10	<i>Celtis laevigata</i>
A10	<i>Crataegus</i> sp.
A10	<i>Fraxinus pennsylvanica</i>
A10	<i>Ilex decidua</i>
A10	<i>Ilex opaca</i>
A10	<i>Impatiens capensis</i>
A10	<i>Liquidambar styraciflua</i>
A10	<i>Microstegium vimineum</i>
A10	<i>Morus rubra</i>
A10	<i>Onoclea sensibilis</i>
A10	<i>Parthenocissus quinquefolia</i>
A10	<i>Populus heterophylla</i>
A10	<i>Quercus michauxii</i>
A10	<i>Saururus cernuus</i>
A10	<i>Senecio glabellum</i>
A10	<i>Smilax bona-nox</i>
A10	<i>Smilax</i> sp.
A10	<i>Toxicodendron radicans</i>
A10	<i>Unknown Cyperaceae</i>
A10	<i>Unknown Poaceae</i>
A10	<i>Viola</i> sp.
A10	<i>Vitis rotundifolia</i>
